

Case Management

The establishment and maintenance of a well-organized case-management system are critical to quality care and to the financial survival of an institution in today's complex delivery system. New payment and tracking systems make better utilization facility resources. For acute-care providers, the development of an in-house case-management system that encompasses the entire continuum of care can better control resources and be financially rewarding.

FHA can help you increase satisfaction and outcomes and decrease costs. We offer the following services:

- Risk assessment for patient populations
- Review of current system
- Review of top DRG's financial consumption of resources
